Course: CIT 140

Assignment: Week 3 - Book Evidence Step

File Name: Attention First, page 72, prompts 32-33

Prompt 32: Tools/Templates and What They Help Participants Do

1. The "Hammer Problem" Framework

What it helps decide/navigate: It helps participants evaluate the clarity of their mission before adopting new technology. It prevents the team from confusing tool ownership with actual capability, warning that a great tool in the hands of a confused system only accelerates confusion.

2. The Tool as a "Reliable Utility"

What it helps contribute/navigate: It executes narrow, specific requests. It serves as a static resource (like an ordinary whiteboard) that provides reliable utility to execute simple tasks without fundamentally changing the team's structure of thought.

3. Technology as a "Team Member"

What it helps decide/create: It expands group capacity by unlocking better thought. It helps participants actively iterate, challenge existing assumptions, and see hidden data patterns they would not have been able to discover alone.

4. The "Master" Role Profile

What it helps contribute/navigate: It focuses obsessively on quality, precision, and protecting the depth of craft. It helps guide technical participants to ensure execution standards do not collapse during the project.

5. The "Chief" Role Profile

What it helps decide/navigate: It manages the group's direction, coherence, and movement. It helps participants evaluate and navigate critical variables such as people, timing constraints, and necessary project trade-offs.

Prompt 33: Three Identity-Building Questions

1. "Is this excellent?" (The Master's inquiry to evaluate the depth, quality, and technical precision a stakeholder brings to the work).

2. "Is this aligned, survivable, and worth it?" (The Chief's inquiry to determine the viability, timing, and structural trade-offs of stakeholder proposals).

3. "Are we acting as gear collectors with no gospel, or are we clear on the mission of the team?" (The core diagnostic inquiry to ensure stakeholders focus on the shared purpose rather than just accumulating tools).
