MERIDIAN FORGE / WEEK 03 / ANALYST DOCUMENT

Stakeholder Map

Who has a stake? · Revision 78

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia Voss supervises night QA, needs evidence preserved and reviews scheduled around shift duties, and can assess workflow suitability. Night-shift operators perform checks and record exceptions, but their needs and influence remain unverified because none has been interviewed. Their perspective is a missing voice.

Engineering

Elias Chen can interpret command and scheduler records and assess technical feasibility. He needs read-only exports and a discussion with the record custodian. He cannot identify the repeated command's origin or be assumed to own records or approve spending. His technical expertise does not equal approval authority, and restart remains unconfirmed.

Operations

Mara coordinates review of the Week 2 recommendation and prioritizes clear consultation routes, confirmed contacts and decision rights. She can confirm participants, but project and spending approval require the authorized decision-maker. Meeting timing remains unresolved.

Sponsor and record custodian

QA: Nia Voss supervises night QA. Confirm her workflow-review scope.

Engineering: Elias Chen advises on technical feasibility. Confirm record ownership and approval limits.

Operations: Routes recommendations to the sponsor. Named contact and authority details need confirmation.

Record custodian: Unnamed. Confirm identity, responsibility and record-access permissions.

Authorizing sponsor: Unnamed. Confirm identity, approval limits and obtain signed authorization.

2. Relationships and next steps

Competing needs and tradeoff

W03-S01 highlights the need to schedule reviews around night-shift duties, creating tension with daytime meetings. Hold separate, shift-friendly sessions for daytime staff and night-shift operators, documenting their perspectives separately without assuming agreement.

Consultation plan

Consult Nia in QA to check workflow suitability, an Engineering lead to assess technical feasibility, and day-shift Operations staff to understand daily cell use. Interview a night-shift operator at a shift-friendly time and consult decision-makers about funding and restart authority before finalizing recommendations. A person with little formal authority still needs a voice because their firsthand experience reveals practical risks and exceptions that managers may miss.

Missing voices and validation

Operator participation: Nia confirms an operator’s availability; record their response or mark it pending.

Access and restart authority: Elias and the review lead confirm record access with the custodian and restart approval with the authorized decision-maker; document responses and unresolved issues.

Next step toward requirements

Confirm missing contacts, the record custodian, sponsor authority, participant availability and shift-friendly meeting times before interviews. The stakeholder map identifies who to consult and who can authorize decisions, guiding invitations without implying consent or project approval.

3. Book evidence connection

Book form connection

The stakeholder-mapping questions helped me distinguish people doing the work, those affected, technical advisers and decision-makers. This improved my consultation plan by identifying missing

> contacts, including night-shift operators, and confirming decision authority before detailed interviews or project approval.
