CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

What must the system do? · Revision 68

R-01 · constraint

Requirement: The system shall restrict Dana’s permissions to confirming the intake workflow and shall not allow her to approve privacy rules or clinical capacity.

Source: W04-S01 · Dana Ruiz

Rationale: Ensures that decisions about privacy and clinical capacity are made only by authorized personnel, preventing unauthorized approvals and protecting visitor privacy and patient safety.

Acceptance check: Test Dana’s account permissions by verifying that she can confirm the intake workflow but cannot approve privacy rules or clinical capacity. Confirm that the system denies unauthorized actions and records the attempts in an audit log.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: A held appointment means a time slot is temporarily reserved but not yet ready. A ready appointment means the required resources are available and the appointment can proceed.

R-02 · nonfunctional

Requirement: The system shall enforce role-based access control to ensure that only authorized personnel can approve privacy rules and clinical capacity.

Source: W04-S01 · Dana Ruiz

Rationale: It protects sensitive visitor information, prevents unauthorized decisions, and ensures that only qualified personnel approve privacy rules and clinical capacity.

Acceptance check: Test user permissions by verifying that only authorized personnel can approve privacy rules and clinical capacity, while Dana can only confirm the intake workflow.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: A held appointment means a time slot is temporarily reserved but not yet ready. A ready appointment means the required resources are available and the appointment can proceed.

R-03 · business

Requirement: A same-day appointment may only be offered when a room and a qualified clinician are available and readiness has been confirmed.

Source: W04-S02 · Dr. Lena Okafor

Rationale: This prevents appointments from being offered when the clinic is not ready and helps avoid delays and confusion.

Acceptance check: Given a same-day appointment request, when a room or qualified clinician is unavailable, then the appointment cannot be offered.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: An appointment can only be marked as ready when both a room and a qualified clinician are available. Confirmation alone does not mean the appointment is ready.

R-04 · functional

Requirement: The system must notify affected staff and visitors when appointment readiness changes after confirmation, providing updated expectations without revealing clinical details.

Source: W04-S02 · Dr. Lena Okafor

Rationale: This keeps staff and visitors informed about changes, prevents confusion, and protects private clinical information.

Acceptance check: Given a confirmed appointment, when readiness changes, then affected staff and visitors receive updated information without unnecessary clinical details.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: An appointment can only be marked as ready when both a room and a qualified clinician are available. Confirmation alone does not mean the appointment is ready.

R-05 · functional

Requirement: The system must keep the visitor's language, communication preferences, and approved support needs available to authorized staff during confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: This helps staff understand visitors' needs, provide appropriate support, and avoid communication problems during appointments.

Acceptance check: Given a visitor with saved communication and support needs, when an appointment is confirmed, rescheduled, or checked in, then authorized staff can still view this information.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: The system must keep the visitor's language, communication preferences, and approved support needs available to authorized staff during confirmation, rescheduling, and check-in. This ensures visitors do not have to repeat their needs.

R-06 · functional

Requirement: The system must support a phone or staff-assisted option for visitors who cannot use the online portal.

Source: W04-S03 · Priya Shah

Rationale: This ensures that all visitors can access appointment services, even if they cannot use the online portal.

Acceptance check: Given a visitor who cannot use the online portal, when they request an appointment by phone or with staff assistance, then they can complete the appointment process without using the portal.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: The system must keep the visitor's language, communication preferences, and approved support needs available to authorized staff during confirmation, rescheduling, and check-in. This ensures visitors do not have to repeat their needs.

R-07 · functional

Requirement: The system must show only basic status information on shared displays and allow detailed information only for authorized staff based on their roles.

Source: W04-S04 · Jordan Kim

Rationale: This protects visitors' private information while helping staff access the information they need to do their jobs.

Acceptance check: Given a shared display, when staff view appointment information, then only basic status information is shown, and detailed information is available only to authorized staff.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information needed. Detailed information must be limited to authorized staff. The system must also record who made each status change, the previous value, the new value, and the time, keeping this history available for exception reviews.

R-08 · functional

Requirement: The system must record who changed a status, the previous value, the new value, and the time of the change. This history must remain available during exception reviews.

Source: W04-S04 · Jordan Kim

Rationale: This helps staff track changes, identify mistakes, and understand what happened when problems occur.

Acceptance check: Given an appointment status change, when a staff member updates the status, then the system records who made the change, the old value, the new value, and the time, and keeps this history available for review.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information needed. Detailed information must be limited to authorized staff. The system must also record who made each status change, the previous value, the new value, and the time, keeping this history available for exception reviews.

Professional Guidance Assessment

IIBA: IIBA is a professional association that provides business analysis standards, guidance, and best practices through the BABOK Guide. It helps analysts identify, define, and validate requirements.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which provides guidelines for writing clear, consistent, and testable requirements.

PMI: PMI focuses on project management and successful project delivery, while Week 4 focuses on identifying, documenting, and validating system requirements.

Application: The guidance helped me make R-08 clearer and testable by specifying that the system must record who changed a status, the previous value, the new value, and the time of the change.

Prepared in Command Nexus. Canvas remains the official submission point.
